### **DETAILED ACTION**

### **Drawings**

1. Figure 1-4 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

# Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1,2,7,15,30,45,46 are rejected under 35 U.S.C. 102(e) as being anticipated by Makino (U.S. Patent No. 6,426,732).

Art Unit: 2673

As per claims 1,7,15,30,45 Makino shows plasma display panel (In col.6 lines 30-33):

A plurality of sustain electrodes and priming electrodes configured to increase the amount of priming particles in a discharge cell to reduce discharge lag formed between one by one with sustain electrodes and a dielectric layer formed on the substrate to deposit the sustain and common electrodes (In col.6 lines 30-67 to Col.7 lines 1-25 and Col.9-12).

As per claims 2,46 Makino shows common electrodes are commonly connected to a common node (In fig.5).

## Allowable Subject Matter

4. Claims 3,4,5,6,8-10,11,12-14,16-18,19,20-25,26-29,31,32,33,35-38,39-44 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reason for the indication of allowable subject matter:

The prior art fails t teach or suggest common electrodes are formed of a three layered structure of Cr, Cu, and Cr sequentially deposited on the substrate as claimed in claim 3-5.

Application/Control Number: 09/695,976

Art Unit: 2673

The prior art fails to teach or suggest a maximum potential difference between the scan pulse and the address pulse is more than the discharge start voltage of the plasma display panel as claimed in claim 11.

The prior art fails to teach or suggest black matrixes formed between the substrate and the common electrodes as claimed in claim 6 and potential difference between on/off periods of the common voltage pulse is 270 or below with common pulse in the period in the on period is 1micro second or below as claimed in claims 8-10,11,12-14,16-18,19,20-25,26-29,31,32,33,35-38,39-44.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nitin Patel whose telephone number is 703-308-7024. The examiner can normally be reached on 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bipin H Shalwala can be reached on 703-305-4938. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9314 for regular communications and 703-308-9052 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-9618.
